Level of Remediation and Land Use Limitations

- 1) The recognized environmental conditions characterized by the focused site investigation and successfully addressed, consist of the contaminants of concern identified in the attached Table A.
- 2) The Remediation Site is restricted to industrial/commercial land use.
- 3) The land use specified in this Letter may be revised if:

Preventive, Engineering, and Institutional Controls

The implementation and maintenance of the following controls are required as part of the approval of the remediation objectives for this Remediation Site.

Preventive Controls:

4) At a minimum, a safety plan should be developed to address possible worker exposure in the event that any future excavation and construction activities may occur within the contaminated soil. Any excavation within the contaminated soil will require implementation of a safety plan consistent with NIOSH Occupational Safety and Health Guidance Manual for Hazardous Waste Site Activities, OSHA regulations (particularly in 29 CFR 1910 and 1926), state and local regulations, and other USEPA guidance. Soil excavated below ground surface must be returned to the same depth from which it was excavated or properly managed or disposed in accordance with applicable state and federal regulations.

Engineering Controls:

5) The asphalt/concrete barrier, as shown on the attached Site Base Map, must remain over the contaminated soils. This asphalt/concrete barrier must be properly maintained as an engineered barrier to inhibit inhalation of the contaminated media.

Institutional Controls:

If the BCT becomes inoperable, the site owner/operator shall notify building occupants and workers to implement protective measures. In addition, any sump located within the building with the BCT shall be sealed with an approved cap and vent system. A caution label must be affixed to the vent pipe indicating that the system cannot be dismantled without proper consultation. A vacuum pressure gauge must be installed on the system to provide a clear indication of when the system is operating properly and when maintenance is required. The sump cover must be resealed if it is ever removed for sump pump inspection, replacement, maintenance or for any other reason. The vent system must also be correctly maintained under such circumstances. Failure to maintain the BCT or the sealed sump shan be grounds for voidance of this No Further Remediation letter.

 - i) Modification of the referenced ordinance to allow potable uses of groundwater;
 - ii) Approval of a site-specific request, such as a variance, to allow use of groundwater at the Remediation Site or at the affected properties;
 - iii) Failure to provide written proof to the Illinois EPA within forty-five (45) days from the date this Letter is recorded of written notification to the City of Chicago and affected property owner(s) of the intent to use Section 11-8-390 of the Municipal Code of Chicago (Potable Water Wells), as an institutional control at the Remediation Site; and
