CONCLUSIONS

[illegible][illegible]

1. **Identify the problem.** The first step in the problem-solving process is to identify the problem. This involves recognizing the issue and understanding its scope and impact.

2. **Analyze the problem.** Once the problem is identified, the next step is to analyze it. This involves breaking the problem down into smaller, more manageable parts and understanding the underlying causes.

3. **Generate solutions.** After analyzing the problem, the next step is to generate potential solutions. This involves brainstorming ideas and considering different approaches to solving the problem.

4. **Evaluate solutions.** Once potential solutions have been generated, the next step is to evaluate them. This involves comparing the solutions against the problem and considering the pros and cons of each.

5. **Implement the solution.** The final step in the problem-solving process is to implement the chosen solution. This involves putting the solution into action and monitoring its progress.

6. **Review the solution.** After implementing the solution, the final step is to review it. This involves evaluating the effectiveness of the solution and making any necessary adjustments.

1991

1. The first step in the process is to identify the problem or issue that needs to be addressed. This involves gathering information and understanding the context of the problem.

The diagram illustrates a two-stage process. In Stage 1, a 'Subject' is exposed to a 'Stimulus' and produces a 'Response'. This 'Response' is then used to determine the 'Stimulus' for Stage 2. In Stage 2, the 'Subject' is exposed to the 'Stimulus' determined in Stage 1 and produces a 'Response'. The 'Stimulus' for Stage 2 is determined by the 'Response' from Stage 1.
