HEALTHY LIFE **BY** **DR. ALICE**

• 18 •

As a result of the above, the company has decided to implement a new system of management of its production facilities. The new system will be based on the principles of lean manufacturing and will aim to reduce waste, increase efficiency and improve quality. The implementation of the new system is expected to start in Q3 of this year.

ANSWER: The answer is (A). The first sentence describes the relationship between the two variables as being positive, which means that as one variable increases, the other also increases.

As a result, the new system will be able to identify and track individual patients more accurately, leading to better treatment outcomes and improved patient safety.

Следует отметить, что в последние годы в ряде стран (Германия, Франция, Италия) ведутся работы по созданию новых типов ядерных реакторов, называемых быстрыми. В отличие от тепловых реакторов, в которых ядерное раз деление происходит в результате теплового излучения, в быстрых реакторах ядерное раз деление происходит под действием быстрых нейтронов. Быстрые нейтроны имеют большую энергию, чем тепловые, и способны вызвать деление ядра даже при отсутствии теплового излучения. Поэтому в быстрых реакторах можно использовать ядра, которые не могут делиться в тепловых реакторах, например, уран-235. Быстрые реакторы обладают высокой производительностью и низким уровнем радиации.

Бюджетные расходы на здравоохранение в 2010 году должны быть направлены на поддержание и развитие здравоохранения в селе, а также на создание условий для его дальнейшего развития.
